PROFESSIONAL SUMMARY

B.Tech. (AI & ML) candidate with 6+ internships delivering production-grade ML systems, full-stack applications, and Python automation tools. Proven record of measurable impact — including 25% backend performance gains — across startups and enterprise environments. Seeking a Software Development Engineer role at Amazon to build scalable, data-driven systems at planet-scale.

TECHNICAL SKILLS

Languages: Python · Java · C · JavaScript **ML/AI:** Neural Networks · Deep Learning · NLP · Computer Vision · Predictive Analytics

Web & Backend: Django · Flask · Spring · Node.js · Angular · HTML/CSS/Bootstrap **Tools:** MySQL · Git · GitHub · GitLab · REST APIs

EXPERIENCE

Project Intern (AI & Automation) · IBM

Jun 2025 – Aug 2025

- ▶ Scoped and mitigated technical risks across 3 concurrent project tracks, reducing scope-creep incidents by eliminating ambiguous deliverable definitions before sprint kickoffs.
- ▶ Engineered project tracking dashboards that unified data from 4 sources, cutting status-reporting time by ~40% and enabling real-time decision visibility for senior leads.
- ▶ Processed and interpreted datasets across multiple IBM research initiatives, surfacing actionable insights that directly informed sprint prioritization.

AI & ML Developer · Stick & Dot Media

May 2025 – Aug 2025 · Gurugram

- ▶ Built and deployed 3 end-to-end ML pipelines for predictive analytics — from raw data ingestion through feature engineering to production API — improving decision-making accuracy for client campaigns.
- ▶ Reduced model inference latency by optimizing preprocessing pipelines and caching feature transforms, enabling real-time scoring in production applications.
- ▶ Shipped 2 production AI integrations with full deployment workflows, making the team's first ML capabilities available to external customers.

AI Development Intern · Insturix

Apr 2025 – Jul 2025 · Delhi

- ▶ Fine-tuned 2 Python-based ML models on domain-specific datasets, achieving measurable improvement in classification accuracy over baseline benchmarks.
- ▶ Accelerated model iteration cycles by standardizing a preprocessing and evaluation framework reused across 4+ experiments, cutting per-run setup time significantly.
- ▶ Delivered AI solutions that passed integration QA on first submission — zero post-deployment regressions — by writing comprehensive unit tests before handoff.

AI Intern · Codematics

May 2024 – Aug 2024 · Delhi

- ▶ Designed and trained neural network models using advanced architectures (CNNs, LSTMs) that outperformed baseline predictive analytics systems in accuracy.
- ▶ Integrated NLP and computer vision modules into a unified AI research pipeline, enabling multi-modal analysis previously requiring separate toolchains.
- ▶ Contributed to 2 deployed AI solutions, with models moving from prototype to integration-ready in under 6 weeks.

Web Developer · Aadhyant Solutions

Feb 2024 – Apr 2024 · Dehradun

- ▶ Delivered 3 responsive, full-stack web applications using HTML, CSS, JS (frontend) and Django/Node.js (backend), each meeting client deadlines with zero critical post-launch bugs.
- ▶ Improved cross-browser compatibility and page load performance through code optimization and lazy-loading strategies, enhancing UX across 4 supported browsers.

Python Developer Intern · Nextpage IT Solutions

Sep 2023 – Nov 2023 · Mohali

- ▶ Boosted backend system performance by 25% by refactoring Python scripts to eliminate redundant DB calls and introducing async task handling.
- ▶ Built 2 Django-powered scalable features serving end-users, integrating 3 external REST APIs with robust error handling and retry logic.
- ▶ Automated 5 manual data-processing workflows, cutting turnaround time from hours to minutes and reducing human error to near-zero.

PROJECTS

Summary Scape · *YouTube Video Summarizer* · *NLP / Flask / JS*

- ▶ Built a full-stack NLP application that automatically generates structured video summaries from YouTube URLs, cutting content review time for users from ~30 min to under 2 min per video.
- ▶ Designed an end-to-end Flask backend integrating a transformer-based NLP model with a polished JS/HTML/CSS frontend — shipped as a fully standalone deployable app.

Learning Management System · *EdTech Platform* · *Python / Django / HTML / CSS*

- ▶ Engineered a multi-role LMS platform from scratch supporting course creation, assignment submission, student tracking, and performance analytics for educators and learners.
- ▶ Implemented role-based access control (admin / instructor / student), enabling granular permission management across all platform workflows without third-party auth libraries.

EDUCATION

B.Tech. in Computer Science Engineering — AI & ML

Expected June 2026

UPES Dehradun, India · GPA: 7.5 / 10

CERTIFICATIONS

- ▶ IBM Machine Learning with Python — Coursera
- ▶ Foundations: Data, Data Everywhere — Coursera (Google Data Analytics)
- ▶ Financial Accounting and Analysis — London School of Business and Finance
